The European Parliament promotes a cyberdefence centre to anticipate and neutralise hybrid attacks

The European Parliament approved a report to transform the strategy against digital aggressions and disinformation through early prevention and direct intelligence sharing. The proposal contemplates the creation of a European Cyberdefence Coordination Centre.

New European regulations are not enough against advanced cyber threats

The accumulation of European regulations on digital resilience clashes with the sophistication of cyberattacks and the physical fragility of computer systems. Theft of deposits in cold wallets exposes that firmware failures can nullify physical safeguards.
