Europe faces severe operational vulnerabilities to hybrid aggressions and hostile cyber campaigns

Various intelligence reports warn of the European Union's preparation deficit against coordinated sabotage, cyberattacks and digital interference operations. Continental critical infrastructures have registered more than a hundred incidents attributable to state actors such as Russia and China.

Cybercrime represents one in five crimes in Spain

Official data confirm the consolidation of the digital space as a priority scenario for national criminal activity. Computer scams lead the volume of offences, along with a notable increase in unauthorised intrusions.
